

ANTSSYS - 321

By Daryl Guppy

ANTSSYS-321 is part of the ANTSSYS Trading Suite of indicators. It is used for trading short term moves in the FX market and Index Futures.

APPLICATION

The ANTSSYS-321 trading system is designed to let traders capture short term moves in the market. This is the system that will yield the most results over the course of using the system. It is designed to use confirmation of trend direction over multiple time frames, along with the ANTs entry signals and a volatility based stop loss to protect trading capital. With confirmation of trend direction on a long term, medium term and short term charts we are then able to look for the Guppy relationships and a classic Guppy Trend Breakout Pattern. This is confirmed with the firing of ANTs signals in the correction direction. This puts the probability of trend direction firmly on our side and gives us the confidence to get into the position. The volatility based stop loss of the Traders ATR ensures that trading capital is protected and allows us to maintain a risk rewards ratio between 2:1 and 3:1. This system is designed to give traders the gradual and regular cash flow required to trade for a living. This system has a take profit point of 30 pips, with a further exit condition – if price moves above 20 pips but fails to reach 30, we exit at 10 pips of profit. This is designed to ensure that trader capture profits in the majority of circumstances. Taking 30 pips a day traders can realistically achieve 500-600 pips a month profit.

TACTICS

- Wait for confirmation of trend direction across all three timeframes
- Enter on Guppy Breakout Pattern and ANTs entry signals
- Use Traders ATR stop loss until further exit conditions are met
- Take profits when price has reached 30 pips of profit
- If price fails to reach 30 pips but has moved above 20 pips, exit trade at 10 pips of profit

RULES

- Trade in the direction of the Long Term Chart
- Wait for confirmation of trend direction on the Medium Term Chart that matches the Long Term Chart
- Wait for trend confirmation on the Short Term Chart that matches the Medium and Long Term Charts
- Look for Guppy Breakout Pattern in the FastGuppy and SuperGuppy
- Enter on ANTs entry signal within the Trade Zone in the direction of the confirmed trend
- Exit at 30 pips profit
- If profit moves above 20 pips but fails to reach 30 pips, exit at 10 pips

ADVANTAGES

- Captures 10 to 30 pips a trade
- Aim to make 30 pips a day to achieve 600 pips for an average trading month
- Volatility stop loss ensures a risk reward ratio between 2:1 and 3:1
- Triple trend direction confirmation greatly reduces risk of failure.
- Has a high rate of success due to confirmation signals coupled with ANTs entry and volatility stop loss

DISADVANTAGES

- Doesn't capture exact turning points
- Doesn't capture extended trend movements
